

INTRINSIC TEMPORAL MODELING

RELATIONAL AND CONDITIONAL MODELING

Global Pattern Extrapolation

Trend Extrapolation

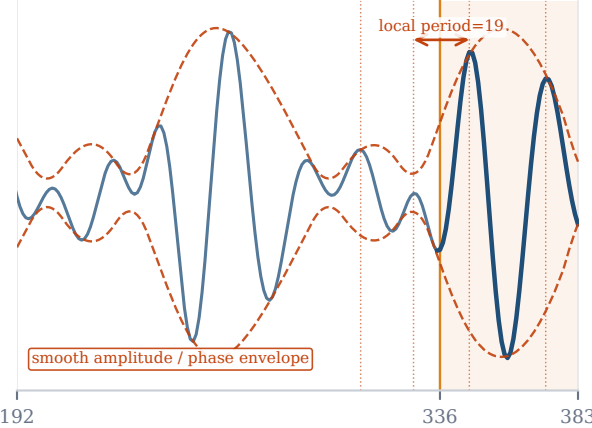

Extrapolate smooth direction and curvature

Nonstationary Dynamics

Evolving Seasonality

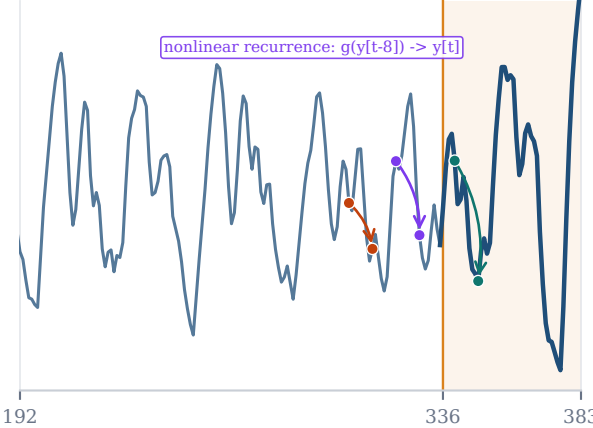

Track continuous phase and frequency change

Complex Temporal Mechanisms

Nonlinear Persistence

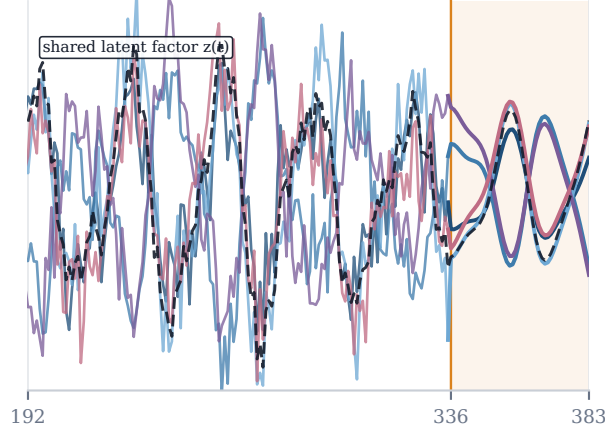

Propagate nonlinear lagged recurrence

Joint Structural Modeling

Common Factor Recovery

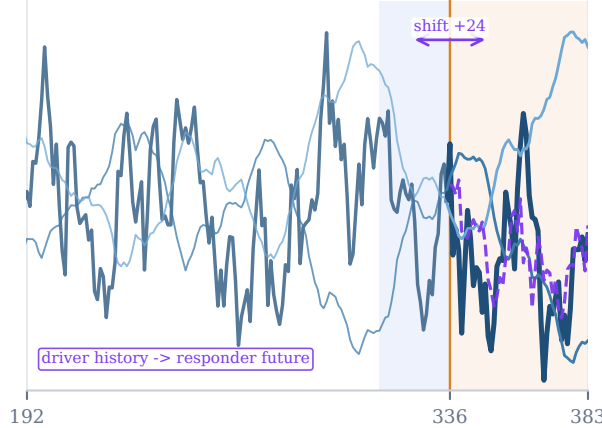

Recover shared latent dynamics

Directed Conditional Forecasting

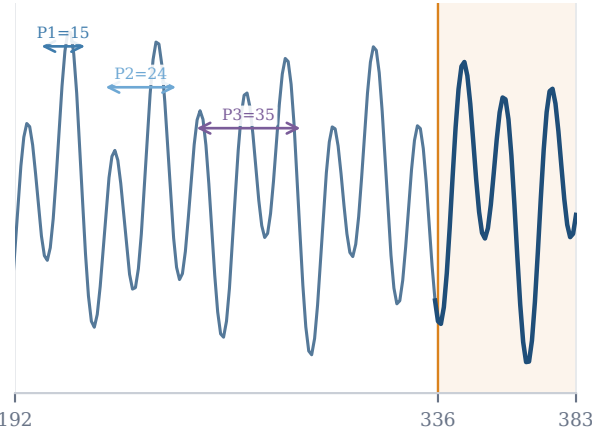

Cross-series Dependence

Transfer a lagged endogenous driver

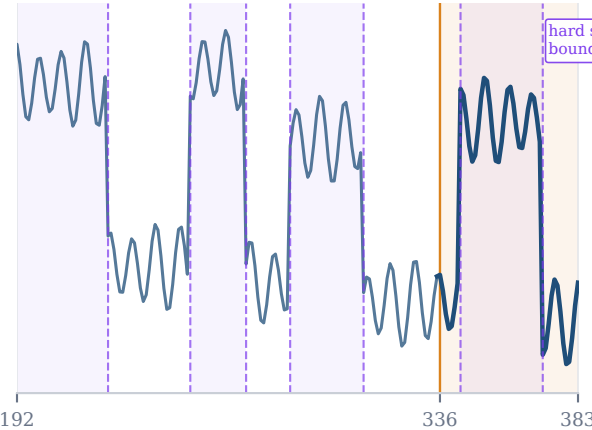

Multi-seasonal Composition

Compose multiple periodic components

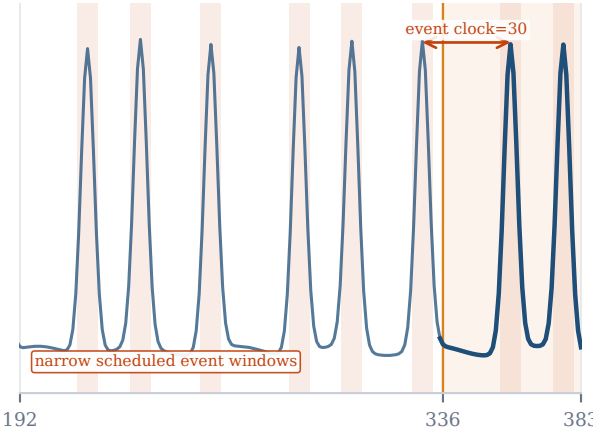

Predictable Regime Switching

Anticipate discrete state transitions

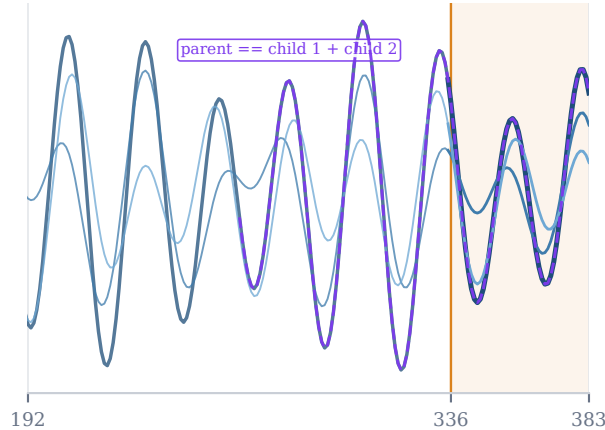

Predictable Intermittency

Anticipate sparse scheduled events

Hierarchical Coherence

Preserve aggregation and child contrasts

Known-future Covariate Response

Condition on future exogenous inputs
